

Downloading and Installing: HSM Custom Backgrounds

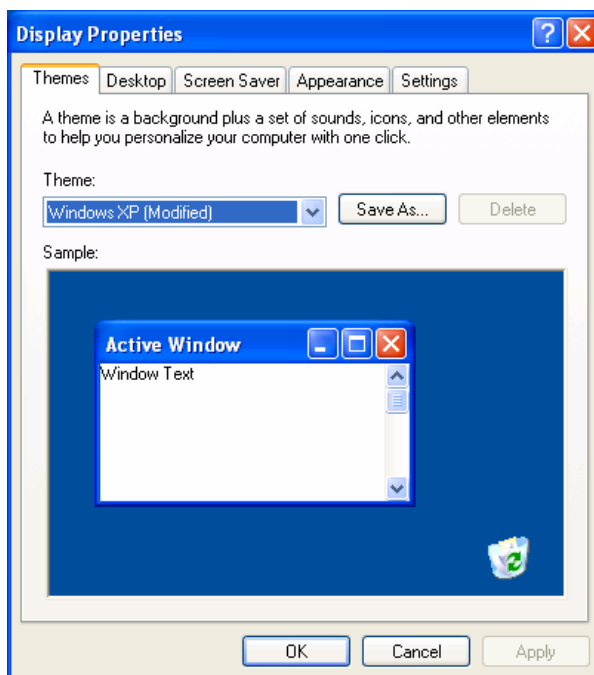

NOTE: Before downloading the HSM Custom Background, it is important to first determine the screen resolution setting of your PC's display.

Determining Your Current Screen's Resolution

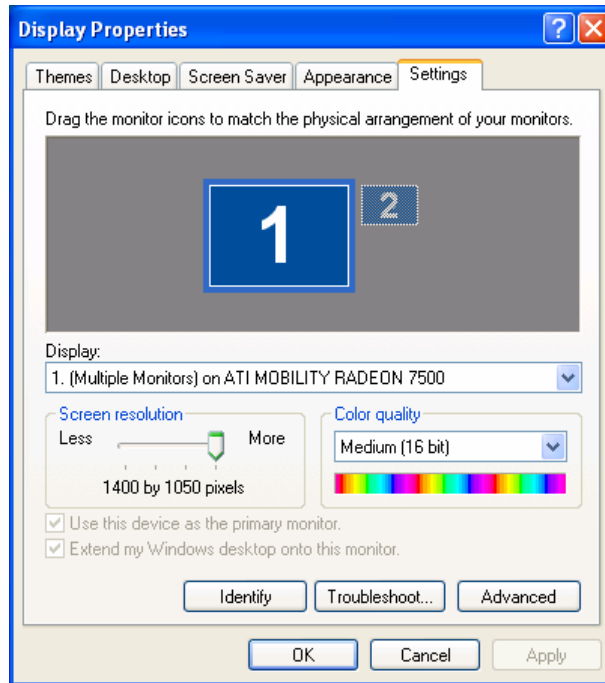

1. *Right-click* within an empty area on your desktop.

2. Click on **Properties**.

3. Click on the **Settings** tab.

Now, within this window you can see the resolution setting of your PC's display.

Look for the **Screen resolution** setting (as shown above), or the **Screen area** setting (as found in Windows 2000 and some older OS's).

In the above example, the Screen resolution is set to 1400 by 1050 pixels. It is important to download the HSM Custom Background that matches *your* screen resolution setting displayed here.

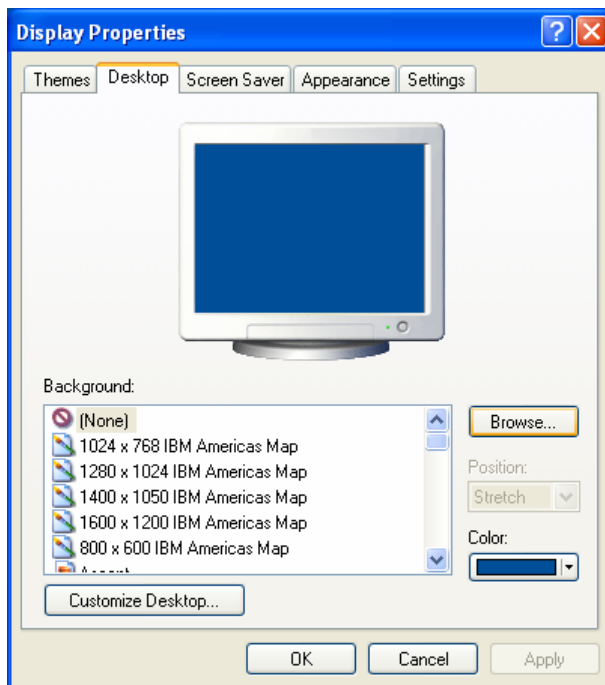

There are 4 backgrounds to choose from. If your screen resolution is different than one of these four choices, then you may choose to download a slightly smaller one. That will work OK.

NOTE: DO NOT make any changes to this window *unless* you know what you are doing!

4. Make a note of your Screen resolution setting and click **Cancel** to exit.

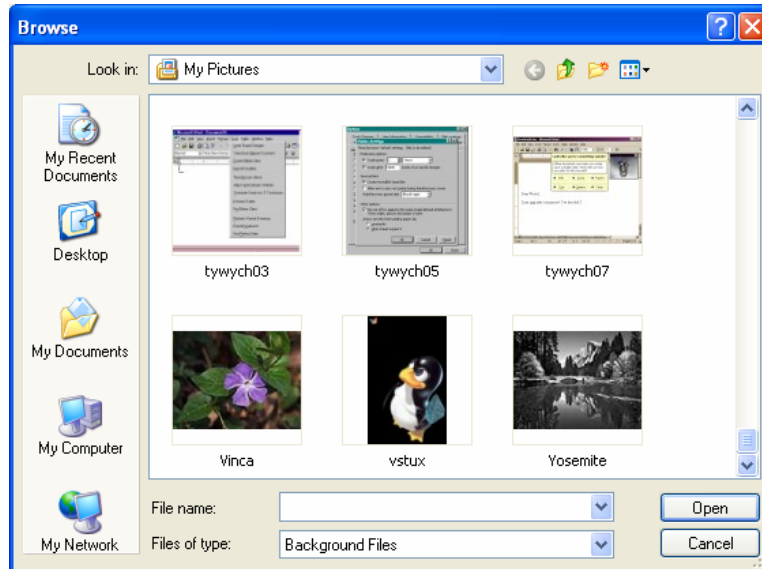

Downloading the HSM Custom Background

1. Now, go back to <http://www.heavensentnc.com/backgrounds.html> and right-click on the background resolution that matches *your* screen resolution.
2. Click on **Save Target As...** and save the background file to the **My Pictures** folder on your computer.
3. Close or minimize your browser, i.e. Internet Explorer, so that your computer's desktop is again visible.
4. *Right-click* on an empty area of your desktop and then click **Properties**.

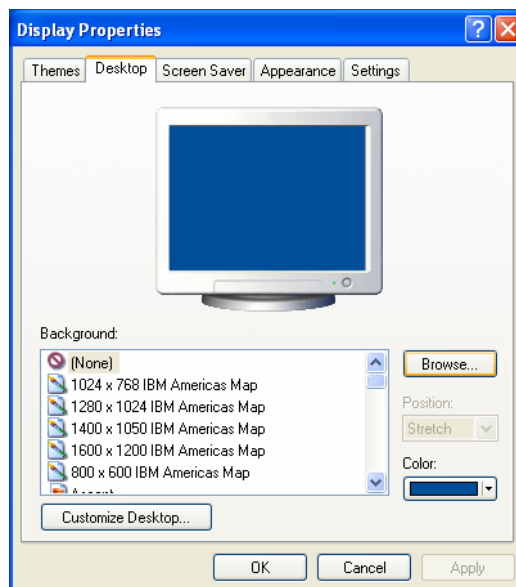

5. Click on the **Desktop** tab, as shown above. This window allows you to change your computer's current background, if one is used. In the example above, no background is currently being used.

6. Click on the **Browse...** command button. A window should open similar to the one below. Notice the **Look in:** box near the top of the window. It should be at the **My Pictures** folder. If not, you will have to navigate to the **My Pictures** folder using the drop-down arrow to the right of this box.

7. Find and click on the HSM Custom Background file that you downloaded earlier and saved within the **My Pictures** folder. You may have to use the scroll bar at the right to locate the file.
8. Click on **Open**. Make sure the HSM Custom Background file that you selected previously is highlighted in this window.

9. Check the **Position:** setting. For best results, this setting should be **Center**.

In some cases, as when you had to select a background that was smaller than your actual display resolution, selecting **Stretch** here may provide adequate results. We recommend **Center** as the standard setting here.

9. Click **OK**.

10. *Enjoy your HSM Custom Background!* ☺

NOTE: If you had trouble successfully downloading and installing the HSM Custom Background, please send a detailed email with the problem(s) that you encountered to gns1@hotmail.com. Our webmaster will try to help you the best he can!
